NTU Characterization Sheet

Date: 11/9/2020

S/N: FLBBCDPML-6566

Nephelometric Turbidity Unit (NTU) Scale Factor

Turbidity units expressed in NTU can be derived using the equation:

$$\text{NTU} = \text{Scale Factor} \times (\text{Output} - \text{Dark Counts})$$

Dark Counts		Digital
	50	counts
NTU Solution Value	2745	counts
Scale Factor (SF)	0.0242	NTU/count
Maximum Output	4130	counts
Resolution	1.0	counts
Ambient temperature during calibration	22.5	°C

Dark Counts: Signal output of the meter in clean water with black tape over detector.

SF: Scale factor is determined using the following equation: $SF = \frac{xx}{(\text{Output} - \text{Dark Counts})}$, where xx is the value of a Formazin concentration. For example: $12.2 \div (2011 - 50) = 0.0062$.

Maximum Output: Maximum signal output the meter is capable of.

Resolution: standard deviation of 1 minute of collected data.
