## 700 nm NTU Characterization Sheet

Date: 5/22/2018 S/N: FLBBBBPML-5057

## **Nephelometric Turbidity Unit (NTU) Scale Factor**

Turbidity units expressed in NTU can be derived using the equation:

NTU = Scale Factor x (Output - Dark Counts)

|  |    |    |        | Digital   |  |  |
|--|----|----|--------|-----------|--|--|
| Dark Counts                            |    |    | 50     | counts    |  |  |
| NTU Solution Value                     |    |    | 3040   | counts    |  |  |
| Scale Factor (SF)                      |    |    | 0.0243 | NTU/count |  |  |
| Maximum Output                         |    |    | 4130   | counts    |  |  |
| Resolution                             |    |    | 1.0    | counts    |  |  |
| Ambient temperature during calibration | 23 | °C |        |           |  |  |

**Dark Counts:** Signal output of the meter in clean water with black tape over detector.

**SF**: Scale factor is determined using the following equation:  $SF = xx \div (Output - Dark Counts)$ , where xx is the value of a Formazin concentration. For example:  $12.2 \div (2011 - 50) = 0.0062$ .

Maximum Output: Maximum signal output the meter is cabable of.

**Resolution**: standard deviation of 1 minute of collected data.
